

Indicator Light Custom Made Type 123

Tolerances unless otherwise stated: ± 0.2

Scale: 1:1

This indicator light was developed for a manufacturer of electric cookers, with steel and with glass control panels.

A new size (rectangular) was the requirement, but with the possibility to be used for fixing in both panels (the cutout in glass is difficult and has large tolerances).

The result of our proposals is this indicator light, which fits with one of the lenses to the steel plate and for glass panels it is fixed on a panel behind them.
