Quadruple Remaining Heat Indicator Type 499

Tolerances unless otherwise stated ± 0.2

Scale: 1:2

Quadruple indicator light for building in.

For use at high temperatures as backlighting behind a diffuse panel, f.e. in glass ceramic appliances as residual heat indicator, fixed by snap-in.

Different voltages, connections, brightnesses, resistances to temperature, conformity marks and also with special specifications available.

For details, please see our web page.

Technical specifications series 499

This indicator light for building in with up to four incorporated signals is designed for snap-in mounting to rear panel from behind and to be used at high ambient temperatures. The signals can be placed on different positions.

The thermoplastic housing with its socket incorporates the fixing elements, the connection means and also the lighting means.

The white housing improves the brightness and optical appearance.

Following specifications are a guide for end users:

Connection means: Tabs (male terminals) 6.3 x 0.8 (for common pole) and lead wires (cables)

Ambient temperature: To be used at a ambient temperature of maximum 160°C

Rated voltage: 250V (can be used down to 220V), 400V (can be used down to 370V) for all voltages, please see "Lighting means"

Nature of supply: AC and DC

Lighting means: Neon glowlamps

Colour of lighting mean: orange

Applicable standard: VDE 0710 and, as far es applicable, IEC 598 (EN 60 598)

Conformity marks:  available

Voluntary conformity marks:  can be arranged on request

Notes and other technical specifications:

Life expectancy: The high bright glowlamps have an average life of 25.000 hours at ambient temperature of 25°C. These values are given for AC supply and standard types. Please ask for specifications for other types.

Other voltages: Under request also other voltages for different natures of supply can be offered.

Other ambient temperature: If the indicator light has to work at other ambient temperatures, ask for special quote.

Brightness: Our indicator has a high brightness light output. Other brightnesses available under request. The life expectancies vary from those specified above.

Recycling: The housing and the socket are marked with the identification of their thermoplastic materials.

Order Instructions

For orders, please indicate: Type reference, number of signals and, if less than four, also his position, nominal voltage and details of connection means. The detailed description of the lead wires (cables), where colours, type of conductors, lengths and finishes of ends (f. e. with connectors) can vary, is also necessary. As usually every customer has different requeriments regarding this connection mean, we do not establish any standard execution.

Examples: Indicator light, quadruple, 499, 250V, lead wires according to drawing or sketch or specifications ..., or Indicator light type 499, triple (position detailed on sketch), 400V, lead wires according to drawing or sketch or specifications ...

Any special requeriment (f. e. specific plastic raw material, other ambient temperature, other lighting means, other voltages, a. s. o.) is considered a special execution and his supply and order identification has to be confirmed specially by us.

These details are necessary for the first order and to be in accordance with the prescriptions of product identification of the standard(s) and (or) of the certification institute(s).

For following orders this can be substituted by a code of ten numbers which we assign to all our products and coincides with our drawing number, which usually has to be made to assure correct product identification.
