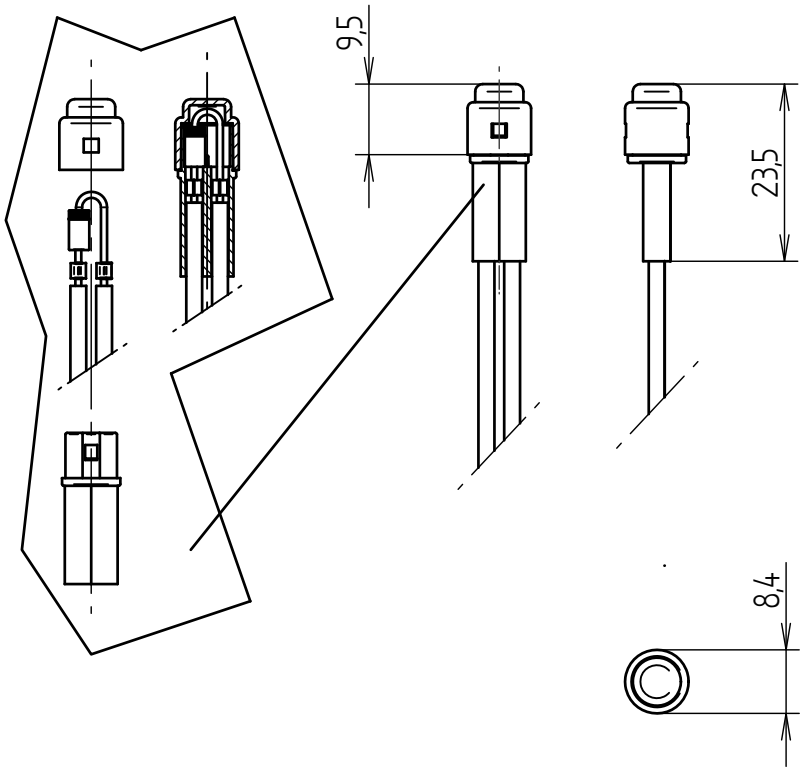
"Winter Switch"
Code 89 455 50 400



Tolerances unless otherwise stated: ± 0.2

Scale: 1:1

This product is an example of how we can design a very competitive product in cooperation with our customer, an important manufacturer of refrigerators.

It is neither a signalling or illumination device nor a switch, it is to say, nothing of our usual design and product range. Nevertheless we could offer a very competitive item, due to the fact that we could profit from existing tools. So no investments were necessary.

It is a simple insulated diode holder with connection lead wires as aerial device and substitute to a capacitor. It is used as a so called "winter switch"
